Academic Year: 2025-2026

1. Abstract

Many salons still rely on manual booking, causing delays and scheduling conflicts. To solve this, we developed a Full-Stack Salon Appointment Management System with a mobile app for customers and a web admin panel for salon owners. Built using Node.js, MySQL, and Flutter, the system enables easy appointment booking, secure authentication, and efficient service management, helping salons digitize operations and improve customer experience.

4. Methodology

2. Problem Statement

Many salons rely on manual booking systems and fragmented records, leading to scheduling conflicts, inefficient management, and poor customer experience.

5. Features / Expected Outcomes

- Digitizes salon operations for better efficiency
- Enables efficient appointment scheduling
- Provides centralized data management
- Improves staff coordination and workflow
- Enhances overall customer experience
- Works seamlessly across web and mobile platforms

Web-site:

App:

SalonSnap

Book. Manage. Relax.

Continue as

- Customer**
Find salons & book appointments
- Salon Owner**
Manage salons & bookings

3. System Architecture

6. Future Scope

- Multi-branch salon management
- AI-based smart analytics for business insights
- Personalized service recommendations
- Customer loyalty and reward programs
- Cloud-based deployment for scalability
- AI chatbot for automated appointment booking

7. Conclusion

The Salon Appointment System successfully digitizes salon operations by providing efficient appointment scheduling, centralized data management, and improved coordination. The platform enhances operational efficiency while delivering a seamless customer experience.
